- Pears
- Plums
- Strawberries

## Fruits with Medium Glycemic Levels

- Cantaloupe
- Papaya
- Pineapple

## Water

- Natural sparkling mineral water
- Spring Water

## *Out of Season Fruit & Vegetables*

Sometimes fresh fruits and vegetables that you enjoy may not be in season. In this case, organic frozen fruits and vegetables are okay (Whole Foods provides a great variety).

Always make sure you read the labels to ensure they do not include sugar.

## *Identifying Organic Produce*

There are 3 main types of produce for purchase and they can be identified by their PLU codes. Most Produce Look-Up numbers (PLU) consist of four digits. They are mainly used in supermarkets to identify fruits and vegetables at the check-out.

Conventional:	Standard four digit PLU numbers (xxxx)
Genetically Modified:	Standard four digit PLUs are prefixed with an 8 (8xxxx)
Organic:	Standard four digit PLUs are prefixed with a 9 (9xxxx)

*You should try to eat as much produce that begins with a `9` (organic) as possible.*
